Foundations of Educational Technology and Online Learning

EDUC631

I believe that everyone should learn Christianity, because people need to know who God is so they have a chance of accepting him into their heart. If students are not taught Christianity, then they will be more likely to follow other religious beliefs that could lead them into trouble. Children who do not have a good foundation in Christianity are more likely to be persuaded to follow the wrong crowd, which could ruin their lives.

Christianity cannot be taught at public schools anymore. Our country is built on Christianity so I believe this is the right way. It is a shame that Christianity cannot be taught in public schools because so many students need that. They need to know right and wrong and that someone out there does love them. I think this is what is missing in some student's lives.

Technology is an excellent way to teach Christianity to the general public. Technology has enabled Christians to reach out and communicate with other people to teach them God's word. People are being engaged through the use of technology, so this is the best way to get people interested in God's word. Just like school aged children, if you find out what interests them and use it, they will get engaged.

The purpose of educational technology is to teach people by using new and different methods. Everyone learns differently, and teachers are constantly trying to create new ways to teaching different concepts. This is where technology comes in. Using technology is where young students and older students are spending a lot of their time. This is why it is important to embrace new technologies by using it in the educational environment. Technology gets students excited about learning because it gives them a way to customize their learning and get more involved in the process. When students have an investment in the learning process, they are more likely to succeed.

Technology also makes the teachers and the students lives easier. Students and teachers can save items to use later for editing. Also it makes teachers and students jobs more efficient, by allowing teachers to input and calculate grades at the click of a button. Technology allows teacher to share information so they do not have to reinvent the wheel. Technology is also going in a new direction with the use of mobile devices.

Mobile devices are becoming more and more affordable. Mobile devices will become a tremendous asset to the educational setting in the future. Teachers will be able to communicate with students outside of the classroom. Also it will allow students faster feedback, which is an important factor to success.

Technology must be taught at all levels of a child's education. Technology skills will become necessary to get a good job and be successful in college. Teachers should start incorporating technology-based lessons or small projects in their classes. The students need the hands on training that creating small projects using basic technology will give them. Some students do not have computers, or mobile devices at home to work on; this is why teachers need to use it in their classrooms. Plus, using technology in an educational setting will train them on how to use technology in a professional setting.
